

Printer Mounting Plate Installation (P/N 424213)

The Printer Mounting Plate performs several functions:

- Provides a solid printer mounting base.
- Designed to work with the 424051-U roll holder when the roll holder arm is positioned below the printer.
- This plate or an equivalent custom design is recommended to protect the cables and media from interfering with each other and the operator when the media roll is mounted under the printer.
- Includes an inertia dampening spring roller to optimize printer performance.

The plate attaches to the three mounting hole locations on the bottom of the Lemur-Z printer.

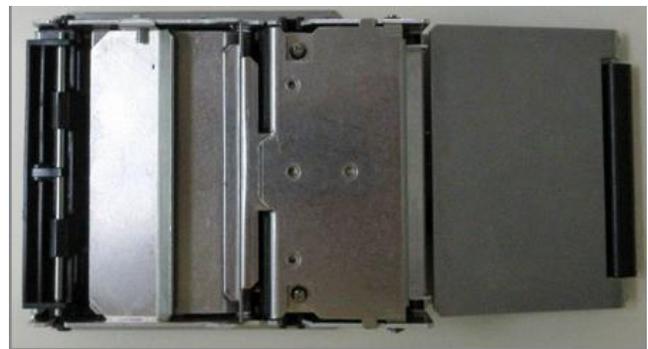

Above shows the location of the six .112" through holes

Use the three 3/16" Hex head Taptite screws, that came with the plate, to mount the plate onto the bottom of the printer.
